

Fork Positioner for Forklift

Forklift Fork Positioner - A fork positioner is actually a device constructed out of high quality materials designed to withstand the most difficult operations and work environments. This particular piece of equipment can enable the person driving to maneuver the forks hydraulically without leaving the seat. Side shifting units have the added ability to be able to laterally position the arms or the entire load in order to facilitate more accurate lifting and position in a quicker and much more efficient manner.

The only one of its kind blade pocket design enables the one operating it to be able to securely sway the unit's blades without any worry of damaging the positioning cylinders. This allows the worker the option to either execute simultaneous or independent blade movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be transformed into fork positioners on existing units.
